Recommendation Letter for Dr. Luo Yan

Dear Sir or Madam,

Please allow me to give a brief overview of my background. I am a full Professor and the Director of the Technical Aspects of Multimodal Systems (TAMS) Group at the Department of Informatics within the University of Hamburg. I am also a fellow of the Academy of Sciences and Humanities in Hamburg, the National Academy of Engineering Sciences in Germany, and the Chinese Academy of Engineering. I have been the General Chair for some RAS flagship conferences, including the 2012 IEEE Multisensor Fusion and Integration, the 2015 IEEE/RSJ Intelligent Robots and Systems (IROS), and the 2018 Human Centred Robotics.

Dr. Luo distinguishes himself by strong academic innovation and sound research judgement. Rather than approaching research through incremental tuning, he tends to reason from first principles: clarifying why a problem matters, whether it is truly necessary in a given system or scenario, and where the fundamental bottlenecks reside—whether in core assumptions, methodological constraints, or practical implementation. Based on this line of reasoning, he identifies credible innovation opportunities and formulates sharper, testable hypotheses. Importantly, his innovation is not merely conceptual—he is disciplined in converting ideas into verifiable research claims through clear baselines, structured evaluations, and well-motivated ablation designs, which is a key marker of high-quality scholarship.

Equally notable is Dr. Luo's capacity to lead research with independence. He can drive a research agenda end-to-end: defining the problem and scope, designing the methodology, setting evaluation criteria, and organizing experimental verification with clear milestones. In collaborative settings, he communicates precisely, aligns contributors around shared hypotheses and evaluation protocols, and maintains strong execution quality—demonstrating readiness to operate as an independent researcher and emerging academic leader.

Based on his demonstrated originality, research maturity, and leadership potential, I recommend Dr. Luo without reservation. I am confident he will contribute substantially to any ambitious postdoctoral program.

Sincerely,

Professor Jianwei Zhang
